

I made extra tables assuming the movie theater has multiple screens and showing times.

#### Movie:

-one movie has multiple showings

show\_start\_date and show\_end\_date represent the date range for how long the movie will be at the theater

#### Tickets:

-one show has multiple tickets  
-multiple tickets can have one customer

#### Theater:

-one theater can have multiple showings

#### Showing:

-one movie has multiple showings  
-one theater can have multiple showings  
-one showing has multiple tickets

#### Customer:

-one customer can purchase multiple tickets  
-one customer can purchase multiple concessions

#### Concessions:

-one customer can have multiple concession items
